

## How do I access WebDAV in Ubuntu

The step-by-step below will demonstrate how to connect to your NAS via WebDAV on Ubuntu.

Client Operating System: Ubuntu 9.10 Desktop

QNAP NAS Firmware Version: 3.2.0

1. Open “Places” > “Connect to Server...”

2. Select “WebDAV (HTTP)” or “Secure WebDAV (HTTPS)” for the Service type according to your NAS settings, follow the fields in the screen and enter your host information. Click “Connect” to initialize the connection.

It will ask you to enter the password of the username for authentication. Please make sure the username and its password has the WebDAV privilege to access this share folder.

3. That's it. This WebDAV connection has been established successfully, a linked folder will be created on the desktop automatically.
